Title: Cloud PDF Text and Metadata Extraction

Author: Pranav Naik

This is a sample PDF created by Pranav Naik for testing the PDF Text and Metadata Extraction project using Google Cloud Functions.

This project is deployed in the asia-south1 region and is triggered automatically whenever a PDF is uploaded to a Cloud Storage bucket named "pdf-upload-pranav".

Once triggered, the project performs the following tasks:

 - Extracts metadata such as:

 - File name

 - Title

 - Author

 - Number of pages

 - Upload timestamp

 - Extracts the full text content from all pages of the PDF

 - Publishes the extracted data to a Pub/Sub topic for further processing or logging

This is an academic project demonstrating the use of Google Cloud Platform (GCP) services including:

- Cloud Functions

- Cloud Storage

- Pub/Sub

- Eventarc
